DEVASTATION EVOKER PVP GUIDE

Midnight Season 1 — Comprehensive Breakdown (OCDGaming)

1. Stats & Gearing [00:00:43]

- **Stat Priority:** Haste > Versatility > Mastery.
- **Haste Thresholds:** Aim to sit above 20% Haste. Higher Haste is preferred to reliably cast Sleep Walk quickly and handle kicks.
- **Mastery Alternative:** If playing heavy control comps (like "Draco Cleave" with a Subtlety Rogue or Frost DK) where your setups are uncontested stuns, you can prioritize Mastery over Haste for raw un-kicked burst damage.
- **Conquest Gear:** Avoid Critical Strike completely as its effectiveness is heavily reduced in PvP. Focus on Haste/Versatility and Versatility/Mastery pieces.
- **Vendor Fix:** If you cannot see the 2-Handed Staff at the PvP vendor (seeing only daggers, maces, etc.), change the vendor dropdown filter at the top from "Evoker" to "All."

Crafting [00:02:17]

- **Ideal Crafted Slots:** Neck, Rings, and off-pieces (Wrist, Belt, or Feet) depending on conquest availability.
- **Embellishments:** Choose either the **Prismatic Focusing Iris** (passive consistent damage over time lens) or **Devouring Banding** (deals damage and passively boosts your highest secondary stat).

2. Evoker Class Tree Adjustments [00:05:16]

The base Evoker tree is versatile and must be adapted based on the enemy composition:

- **Anti-Caster Setup:** Spec into cooldown reduction for Quell (kick) putting it on a 1-minute cooldown. Combine this with Wing Buffet and Tail Swipe (DB) to continuously interrupt and lock down casters.
- **Anti-Melee Setup:** Drop *Enkindled* and pick up **Walloping Blow**. Wing Buffet will knock melee classes much further back and apply a 70% movement speed reduction. Excellent for when Rogues or Warriors waste their gap closers.
- **Panacea:** Highly recommended. Though seemingly small, the tooltip scales favorably in PvP and adds necessary passive healing.
- **Stretch Time:** A phenomenal defensive utility tool. Not only does it act as a stun, but casting it at low health gives your healer a few free globals to save you with major cooldowns (like Life Cocoon or Ironbark).

3. Devastation S1 Tier Set & Builds [00:07:48]

Season 1 relies heavily on utilizing the 4-Piece Tier Set. It increases *Azure Sweep* damage by 50% (and an additional 100% to your primary target). You also gain an additional Azure Sweep when casting Eternity Surge, and casting Astral spells reduces the cooldown of Eternity Surge.

> **Tier Set Optimization:** Play the 4-set utilizing Legs (Haste/Mastery), Gloves (Haste/Vers), Helm (Crit/Mastery), and choose between Chest (Crit/Haste) for more haste or Shoulders (Crit/Mastery) for more mastery.

Build A: Scalecommander (Best Overall) [00:10:22]

The undisputed best specialization for Solo Shuffle and 3v3s due to high, consistent cleave without massive setups.

- **Shattering Stars:** Mandatory. When using Eternity Surge, it fires Shattering Stars. When *Scintillation* procs, it casts a 40% power Eternity Surge, which counts as Level 1, automatically shooting two free Shattering Stars for massive passive output. *(Note: Charging past Level 1 adds about 13k damage, which is rarely worth the cast time).*
- **Iridescence Focus:** Prioritized over double Deep Breath because it boosts blue spells by 20%. When active, Azure Sweep damage jumps from ~14,000 to ~18,000, compounding beautifully with S1 Tier modifiers.
- **Event Horizon:** Looking forward to completing the S1 Tier set, Event Horizon becomes incredibly powerful for cooldown reduction, fueling continuous Mass Disintegrates.

Build B: Flameshaper (Niche/Control) [00:13:08]

- Fun and thematic but setup-heavy. Avoid *Iridescence* since *Consume Flame* doesn't scale with it. Use **Scorch Embers** to gain 25% increased damage while Fire Breath is active.
- Rundown: Damage is hyper-reliant on keeping Fire Breath active. If Fire Breath is purged, your damage profile crashes.

4. Official Talent Import Strings

Import these directly into your game client. These are the exact builds provided by OCDGaming.

Scalecommander (Iridescence Stars - Main Arena Build)

```
CsbBPJc41CfcseY0baneJ1IHrBAAAAAAAAAAwYmZGMDzwMMzMGjZaMzMZmxyMzMzYGzMzAMDDzMLjZg
BYwCsMGN2GQmJAbYgZGYMA
```

Scalecommander (Double DB - Niche)

```
CsbBPJc41CfcseY0baneJ1IHrBAAAAAAAAAAAzMzgZYGmZMzMGjZaMzMNzMWmhZmZGzMzAMDDzMLjZg
BYwCsMGN2GQmJAbYgZGYMA
```

Scalecommander (BG Blitz Build)

```

```

5. PvP Talents [00:14:12]

- **Standard Trinity:** Obsidian Mettle, Unburdened Flight, and Time Stop.
- **Scouring Flame (Flameshaper):** Because Flameshaper grants two charges of Fire Breath and -5s cooldown, Scouring Flame is incredibly oppressive. A Level 1 Fire Breath strips two beneficial magic effects. Incredible counter against Resto Druids/Shamans.
- **Divide and Conquer:** Highly situational. Play this *only* if running Draco Cleave. **Do not** use this in BGs/Blitz if you have ranged teammates, as it blocks Line of Sight for your own allies, ruining their damage and healing.
- **Nullifying Shroud:** Not recommended for Devastation (better for Preservation). Use Time Stop instead.

6. Burst Rotations [00:16:48]

Scalecommander Rotation (Most Optimal) [00:20:10]

1. **Oppressing Roar**
2. **Deep Breath** (to apply the stun)
3. **Dragonrage**
4. **Tip the Scales → Eternity Surge**
5. **Fire Breath**
6. **Double Mass Disintegrate**
7. **Azure Sweep** (Spread Bombardments)
8. Spam **Disintegrate** to extend Bombardment windows and push CDR for empowered abilities.

Flameshaper Rotation [00:16:48]

1. **Oppressing Roar**
2. **Deep Breath** (Stun)
3. **Dragonrage**
4. **Tip the Scales → Eternity Surge**

5. **Disintegrate → Azure Sweep**
6. **Fire Breath** (Tap it to apply the 1-tick DoT to activate Consume Flame multipliers)
7. Spam **Eternity Surge** and weave Essence Bursts to proc Twin Flames.

7. Advanced Niche Mechanics [00:23:56]

- **Mass Disintegrate Single-Target Buff:** Mass Disintegrate hits for 10% *more* damage per missing target (nerfed from 15% in previous patches). It excels in single-target burst scenarios.
- **The "Root Bypass" Trick:** If multiple enemies are grouped, your cleaves (Mass Disintegrate / Eternity Surge) will automatically leech to them. However, if you **Root** secondary targets right next to your primary target, your Mass Disintegrate will actively ignore the rooted targets and funnel all its focused damage modifiers directly into your primary un-rooted target. This is a crucial trick to bypass AoE spreading and force single-target executions.
- **Macros & Spreadsheets:** OCDGaming features a robust list of dedicated PvP macros (Dragonrage/Potion bursts, self-target Living Flame, Disintegrate Deep Breath cancels) available in their linked Google spreadsheet from the video. These integrate well with advanced setup and addon tracking configurations.
